Xecute the Deal - `/web`

This folder holds the frontend implementation for our application.

Getting started

To get started with developing / running locally, clone the repository, and install the dependencies using:

```
npm install
```

Running Production

To build and serve the production application, you can use:

```
npm build
npm run serve
```

Running the app development server

To build and serve the web app locally, you can use:

```
npm start
```

Running tests

```
# Run the unit tests
npm test
```

The unit tests use Jest.
